corian®

SOLID SURFACES

about us

Corian® is the brand name for the original solid surface material. DuPont scientists and engineers pioneered the technology 40 years ago, that makes DuPont Corian® the standard of beauty, durability and easy care. More than just countertops...Corian® lends itself to imaginative uses, innovative interpretations and enduring applications. It can be cut, routed, drilled, sculpted, bent or worked like a fine wood. The ever-evolving color palette extends to more than 100 colors...if you can envision it; chances are you can create it with Corian®.

IS CORIAN® STAIN-RESISTANT?

Corian® is stain-resistant. Because it is nonporous, stains cannot penetrate the surface... so it is easy to clean and maintain.

DOES CORIAN® REQUIRE SPECIAL SEALING?

Corian® is non-porous. Unlike natural stone, it never needs sealing making it easy to live with! Corian® is a beautiful low maintenance surface that you are sure to enjoy for many years to come.

IS CORIAN® HEAT-RESISTANT?

DuPont does not recommend placing a hot pot directly on Corian®. Although, it remains stable and undamaged in temperatures up to 212°F, high heat or flame can damage your surface. In most cases, this damage can be repaired. To protect it from heat damage, always use a hot pad or trivet with rubber feet when using hot pots or heat generating appliances.

IS CORIAN® EASY TO CLEAN?

Corian® is easy to clean and is certified kosher. Soapy water or an ammonia-based cleaner is all that is necessary for day-to-day cleaning. With proper cleaning, it also resists the growth of mold, mildew and bacteria. Minor scratches, burns or discoloration are easy to repair.

WHAT MAKES CORIAN® GREEN?

There are few products like Corian®...environmentally friendly and striving for less and less impact on the environment. Corian® is...

- Durable & renewable...generates up to 1/3 less waste than stone in fabrication.
- Chemically inert & environmentally responsible...low impact on both indoor and outdoor environments. It meets the most restrictive 'food zone' standards for food set forth by the Sanitation Foundation under NSF Standard 51.
- Non-Toxic...at room temperature is non-toxic, with virtually no "off-gassing" of volatile organic compounds and the joint adhesives and sealants used have extremely low VOC emissions.
- Our processes reduce our environmental footprint...responsible choices in raw materials, in the manufacturing process and in packing.
